Risk assessment in the first trimester will identify the need for preventive treatments to avoid pre-eclampsia in high-risk patients.

**ACT!** Counsel every pregnant woman about pre-eclampsia

**SCREEN!** Offer pre-eclampsia screening in weeks 11-14 and advise for prevention for high risk patients

- A special Doppler scan to analyse the blood flow through the uterine arteries
- Measurement of blood pressure
- The screening test involves medical history
- A blood test to identify two specific proteins (PAPP-A, PIGF)

**22 May**

World Pre-eclampsia Day
