Assess your personal pre-eclampsia risk at an early stage. A pre-eclampsia screen contributes to individual risk assessment and adequate treatment can help avoid possible complications for you and your baby.

ACT! Get counselling on pre-eclampsia

SCREEN! Have your personal risk determined in gestational week 11-14

A specific ultrasound examination measures the blood flow through the uterine artery

A blood test determines the placental growth factor (PIGF) in your blood

Your blood pressure is measured

22 May is World Pre-eclampsia Day
