

conect4children

Better medicines for babies, children and young people through a pan-European clinical trial network

The conect4children project (c4c)

is a European project supporting the development of new medicines and therapies for children of all ages.

In the project, 35 academic and 10 industry partners (pharmaceutical companies) are working together to create a European network that will facilitate clinical trials across Europe. This will enable children get access to safe and effective treatments tailored to their needs.

c4c makes your voice heard

As a patient, parent/carer or patient representative, you know first-hand what it is like to live with a particular disease or health condition. Sharing these insights is essential to improving clinical research.

c4c ensures that patients, parents, and carers have an active role in designing clinical trials for children and young people.

Join our group of experts and help make clinical trials relevant and acceptable to patients who will take part in them.

How can you help?

- Help researchers to identify disease burden or unmet clinical needs
- Give your input on the design of clinical trial protocol
- Help to co-create informative materials for young patients participating in clinical trials
- Help to review the clinical trial lay summary for patients and general public

Join our group of experts! You can help!

If you are a young patient (older than 18 years old), a parent, a carer, a patient representative or a professional of a patient organisation, you can help!

Sign up via the link below and the c4c team will be in touch. You will be invited to participate in interviews, focus groups, online surveys or even face-to-face or online events with peers and researchers.

Together, we can improve clinical trials and build a world with better medicines for babies, children and young people!
